

# Air Flight status

**Air Flight status** is an ultra-fast and efficient solution for airlines that want to provide their clients with last minute information of their flights.

**Backoffice**

- Some examples of information that can be provided:
- Status (Scheduled, Cancelled, Delayed, In air, etc.).
  - Diversion status and diversion route information.
  - Departure and arrival gate and terminal.
  - Baggage claim assignment.

The solution is offered through an easy to implement set of APIs. We can also provide flight on time statistics and dashboards when airlines require them as scheduled.
